

Never Miss

Over the course of many months in 2009, CertainTeed Gypsum technical services evaluated the Never Miss and Final Coat products when used with CertainTeed Gypsum ready mix compounds. Several different variations of the products, including colors and tint strengths were evaluated. None of the products adversely affected the compounds.

We do prefer that the 'concentrated' version be used as it carries the least ability to alter the compound. Properties tested included sanding, viscosity, spread/slip, cracking and bond. The end users color choice did not affect the performance in any way.

Regards,

Christopher K Athari
