***Fits most major brands
...whether you rent or own!***

Pump Boot - TS004

Our pump boot is designed to keep the bottom of your pump sealed. While the pump is not in use, you will no longer need to use a bucket of water to keep mud from drying. The boot provides a seal that keeps joint compound moist for extended periods of time. It allows for clean and convenient pump transportation. Tip: lubrication helps for a smooth fit.

***Eliminates
daily cleaning***

Flat Box Adapter Plug - TS001

This plug is designed for your flat box adapter. It will prevent drying of material which causes unnecessary and annoying scratches. Also great for overnight storage, this plug helps keep your flat box adapter moist and ready for immediate use.

***Helps
eliminate
scratches***

Adapter or Gooseneck Plug - TS003

After using your angle box, this plug seals your pump adapter while your pump is not in use. It is great for breaks, cleaner transportation of your pump and overnight storage.

After running your taper pump, this plug seals in moisture to avoid the hassle of digging out hardened material, resulting in easier future applications of joint compound. This makes for a cleaner, more efficient method of transporting your pump.

***Enables clean
transportation***
